

To ensure the success of your project, Bodet offers project management services and project owner assistance

The success of your project

Your project requires expertise in numerous skills in order to ensure your objectives are met:

ightarrow quality

Matching the solution to the needs of various users (Senior Management, HR Manager, IT Manager, operational managers, employees, etc.), whilst responding to existing constraints.

ightarrow cost

Keeping to the approved budget committed to the project.

ightarrow deadlines

Ensuring that deadline requirements are met for implementing the solution.

Bodet places key skills at your disposal to ensure that your project will succeed.

Tailor-made services

We adapt our services to the unique features of each project entrusted to us:

- A project management methodology which is part of ISO 9001 quality certification
- AF AQ
- → Teams with experience in the specialised areas of our software packages.
- Multi-disciplinary teams which take account of operational and technical aspects.
- This experience allow us to commit to the success of your project.

project management

support that's made-to-measure

	A 7-stage approach:						
1	Initialisation						
2		Analysis Matching					
3			Implementation				
4				Acceptance			
5					Training		
6						Release	
7							Post-release monitoring

1. Initialisation

- . Drawing up the quality assurance plan
- . Internal communication (presentation of the solution)
- . Operational, regulatory and technical audits
- . Drafting and joint approval of the schedule
- . Making up project teams (from the client's side and from BODET)
- . Drawing up the technical specification (optional)

2. Analysis/Matching

- . Transfer of operational skills
- . Functional analysis and matching research
- . Acceptance file (optional)

3. Implementation

- . Implementation of software packages on the test server
- . Study, implementation and testing of interfaces and specific developments
- . Application settings and operational testing
- . Data recover and integration testing
- . Commissioning terminals

4. Acceptance

- . Training the project team
- . Carrying out tests specified in the acceptance file (optional)

5. Training

- . Drawing up documentation (optional)
- . Training application users:
 HR Administrators/IT Administrators
 Manager users/Staff users

6. Release

- . Implementation on the production server
- . Implementing data recovery
- . Help with launch

7. Post-release monitoring

- . Technical support
- . Maintenance and software/hardware updates
- . Additional training
